

AMENDMENTS TO THE SPECIFICATION

Replace the paragraph on page 11, lines 11-14 with the following amended paragraph:

Device **40** and base station **80** of Figures 1 and 2 respectively, contain electronics, preferably including one or more microprocessors, that recognize, extract, and decode the data from the incoming analog or digital TV signal in accordance with how the data was initially encoded into the signal. The exact procedure of extracting and utilizing the data on the receiving end depends on the particular preferred embodiment.
